

GRIND MORE. HEAR LESS.

The world's best selling Food Waste Disposer.

Made in the USA.

insinkerator.co.nz

Stay in the moment.

The kitchen doesn't pause anymore. It moves – between cooking, conversation, and everything in between. Moments overlap, evolve, and carry on without stopping.

Preparation becomes conversation. Cooking blends into hosting. The space holds it all without asking you to step away.

InSinkErator keeps New Zealand kitchens flowing. What once interrupted is now handled in the moment. Food waste is taken care of instantly, quietly and without disruption.

Creating a space that keeps pace with life, adapting to what's happening, who's around, and letting you *stay in the moment*.

More moment. Less noise.

A food waste disposer keeps everything moving supporting the moment without ever becoming it.

An InSinkErator food waste disposer sits beneath the sink grinding food waste as it happens. Turning what would slow things down into something that is instantly and quietly dealt with.

With SoundSeal® Technology, it works quietly in the background, keeping the kitchen calm and uninterrupted.

Engineered to handle even the toughest food waste, quietly.

The Evolution Plus Series delivers exceptional performance with impressively quiet operation. It's the most advanced range of food waste disposers, designed to make everyday kitchen clean-up faster, easier, and quieter.

Lift & Latch® Technology

Lift & Latch® Technology and rubber grips on trim shell make it easy to install into new or existing kitchens and can be fitted to most sinks

SoundSeal® Technology

Advanced Series garbage disposals feature two levels of SoundSeal® Technology for a quieter kitchen.

MultiGrind® Technology

4-stage design makes quick work of both hard and fibrous foods

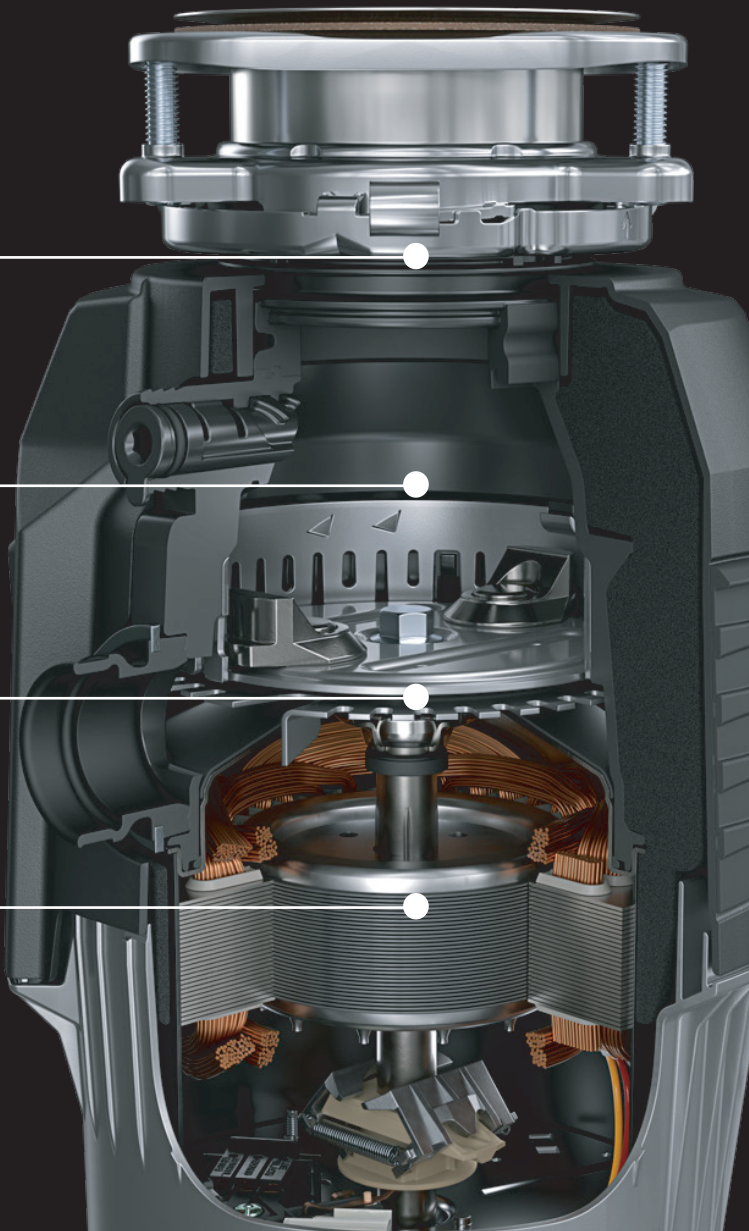

DuraDrive® Induction Motors

Powerful, heavy-duty motors ensure high performance and long life.

Where does your food waste go

Each year in New Zealand, tons of food waste end up in landfill, where they break down and release methane, a greenhouse gas far more potent than CO².

Composting helps, but it's not always practical for busy households. InSinkErator® offers a simpler, more sustainable solution—grinding food waste at the sink.

In many areas, wastewater treatment plants can even turn it into renewable energy.

01

Into the drain

Food scraps enter through the sink and are ground into fine particles by your InSinkErator.

03

Wastewater treatment

At the treatment plant, organic matter is separated and broken down by micro-organisms – a natural process that produces methane gas.

02

Into the sewer

Those fine particles flow out through the discharge pipe and into the underground wastewater network.

04

Methane capture

Modern treatment plants capture that methane before it escapes – containing it as a usable energy source.

Dispelling the Myths

DOES A DISPOSER HAVE BLADES?

No, food waste disposers do not have blades. They quickly and quietly grind food waste using swivel lugs and Multi-Grind Technology™.

YOU CAN'T PUT THAT DOWN A DISPOSER?

A food waste disposer can handle a wide range of food waste including, fruits, veggies, chicken bones, fish bones. Tea bags (without strings or staples), egg shells, avocado skins/stones and celery.

DOES A DISPOSER CLOG DRAINS?

Modern disposers grind food waste into very fine particles. Also, food waste is 70-80% water, so easily travels through drains.

DOES A DISPOSER USE A LOT OF WATER & POWER?

Although operating a food waste disposer does involve running water and using electricity, the environmental impact is minimal. Disposers use only about 1% of a household's total water consumption (about one flush of the toilet per day) and cost approximately \$2 per year in electricity to operate.

ARE DISPOSERS NOISY?

InSinkErator Sound Limiter insulation and Anti-Vibration Mount Technology mean the Evolution™ models can operate with minimal noise versus standard disposers. We also recommend installing a quality sink, which can eliminate vibration and noise.

DO YOU NEED A DOUBLE SINK?

A food waste disposer can be installed with both a single or double bowl sink. Check sink and food waste disposer dimensions for details.

Reducing food waste starts in the kitchen.

Waste makes up a large portion of household rubbish. Managing it at the source means less in the bin, fewer trips outside, and a cleaner bench between cleans.

Shop Responsibly

Make a shopping list of items you need before you get to the supermarket. Only buy enough fresh foods for a week. Choose shelf-stable foods like canned goods, pasta, rice and legumes. Utilise your freezer to store bread, meats, vegetables and fruit.

Plan meals & save leftovers

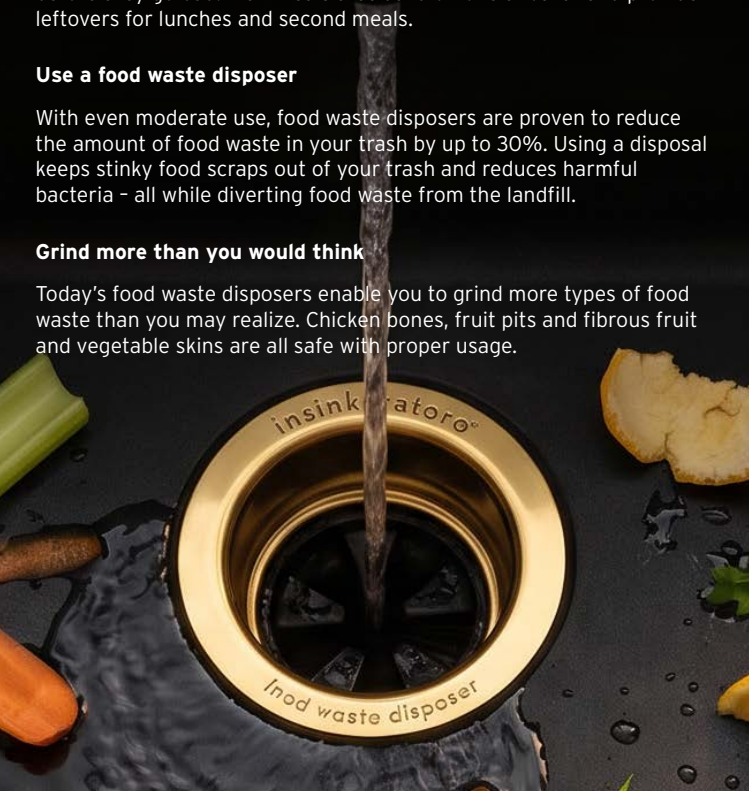

Taking an inventory of your pantry is a great first step to plan your meals and avoid food waste. Check expiration dates to use foods before they go bad. Plan meals that build on one another and provide leftovers for lunches and second meals.

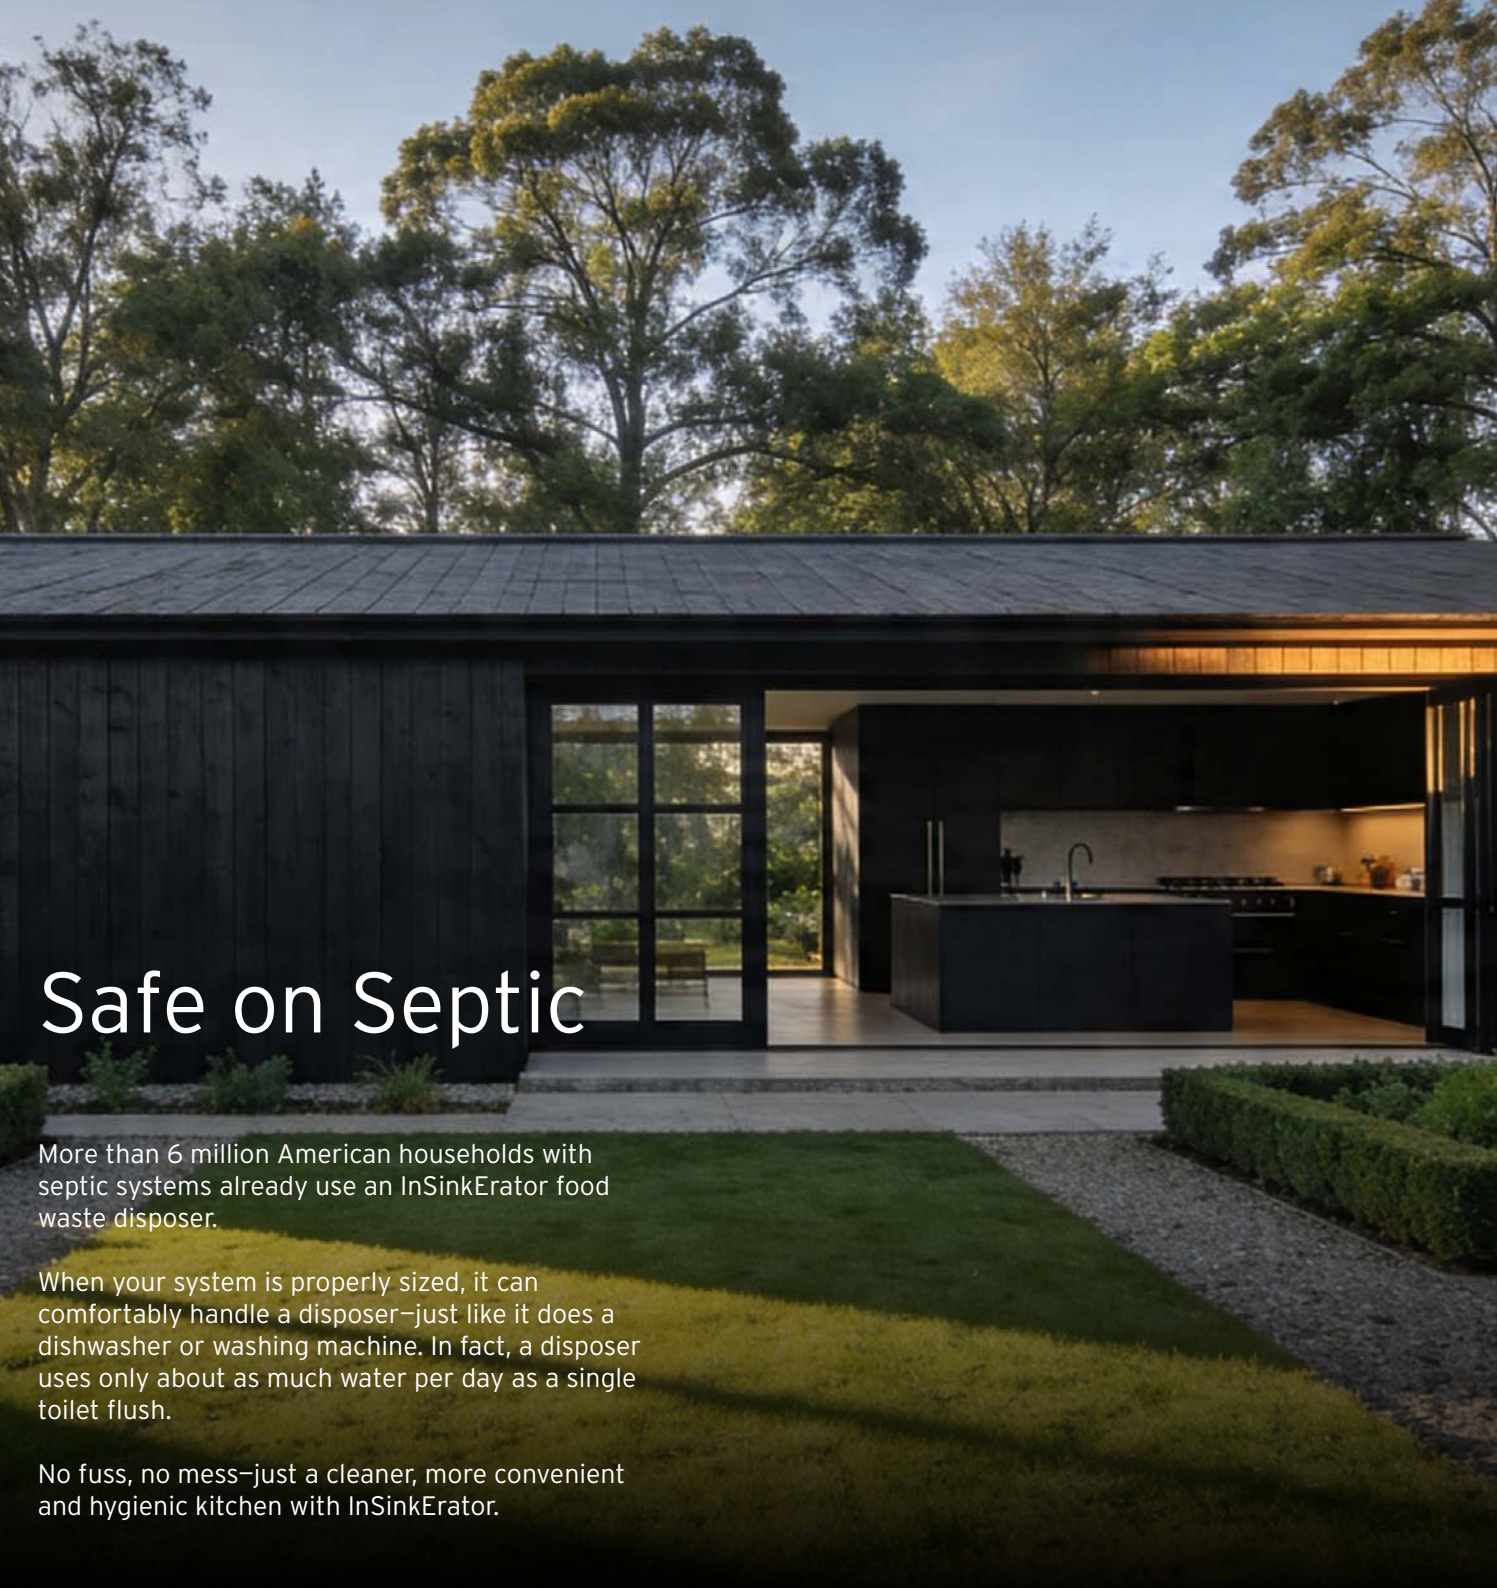

Use a food waste disposer

With even moderate use, food waste disposers are proven to reduce the amount of food waste in your trash by up to 30%. Using a disposal keeps stinky food scraps out of your trash and reduces harmful bacteria - all while diverting food waste from the landfill.

Grind more than you would think

Today's food waste disposers enable you to grind more types of food waste than you may realize. Chicken bones, fruit pits and fibrous fruit and vegetable skins are all safe with proper usage.

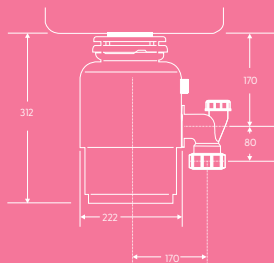

Safe on Septic

More than 6 million American households with septic systems already use an InSinkErator food waste disposer.

When your system is properly sized, it can comfortably handle a disposer—just like it does a dishwasher or washing machine. In fact, a disposer uses only about as much water per day as a single toilet flush.

No fuss, no mess—just a cleaner, more convenient and hygienic kitchen with InSinkErator.
